Flagship model GPT-15000 Series

GW Instek introduces the 500VA output capacity flagship model safety analyzer GPT-15000 series.

GPT-15000 series is the first safety analyzer in the world to comply with IEC 61010-2-034

500VA output capacity GPT-15000 provides better display, adjustment and measurement resolution, Ground Continuity check, more features such as Statistics, Analysis, Sweep and Rear Output, more functionalities such as IR mode, listed AUTO mode and User-Defined Signal I/O Output Signal, Capacitive load test capability up to 47 μ F and USB storage(Test result).

IEC 61010-2-034

Safety analyzer-the GPT-15000 series, is the first safety analyzer in the world to comply with IEC 61010-2-034 (Safety requirement for electrical requirement for measurement, control and laboratory use – particular requirements for measurement equipment for insulation resistance and test equipment for electric strength).

IEC 61010-2-034 stipulates that the requirements of the software and hardware interfaces must be followed while designing high voltage and insulation resistance test and measurement instruments so as to ensure that users are provided with necessary protection and warning while using the instruments.

GPT-15000 Series Key Features

- 500VA AC Test Capacity (short circuit current > 200mA)
- 7" TFT LCD
- Comply with IEC 61010-2-034 design requirement
- Manual Test mode / Auto Test Mode
- True RMS Current Measurement
- Zero Crossing Turn-on Operation
- Controllable Ramp-up & Ramp-down Time
- Statistics & Analysis Function
- Capacitive Load Testing Capability up to 47 μ F
- Sweep Function for DUT Characteristic Analysis
- Convenience Listed AUTO mode easy to read result and judge
- Internal Storage and USB Storage available
- Barcode function available
- Rear panel output available
- Standard Interface : RS-232C, USB host/device and Signal I/O
- Optional Interface : GPIB or LAN
- Universal power input

Main Feature1 : Time control ~ Ramp up & down

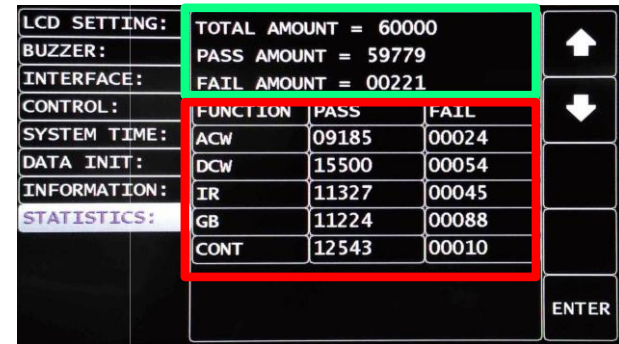

Main Features 2: Statistics

The STATISTICS setting where PASS and FAIL amounts and TOTAL amounts to date are shown in the green highlight below. Also, the detailed distributions of PASS and FAIL amounts from each test functions are well disclosed for viewing in the red highlight below.

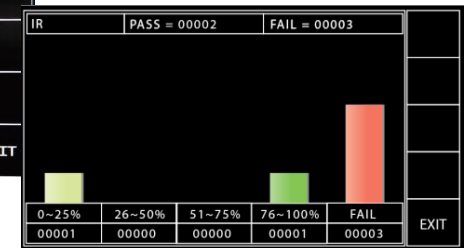

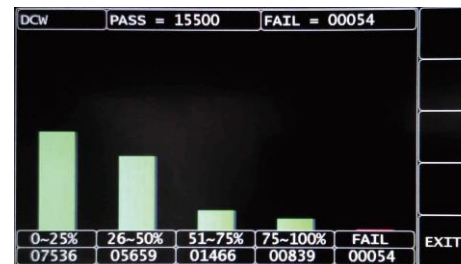

PASS, FAIL amounts & TOTAL amounts

PASS & FAIL amounts distributions in each test function

The distributions of PASS and FAIL statistics are well illustrated in the histogram with table display in which the upper side reads the individual PASS and FAIL amounts for test function. The mid and lower side depicts FAIL amounts in the far-right red strip with number below, whilst the PASS amounts are described in strips of different colors with numbers below indicating the percentage of varied measured values in relation to the set HI & LOW range.

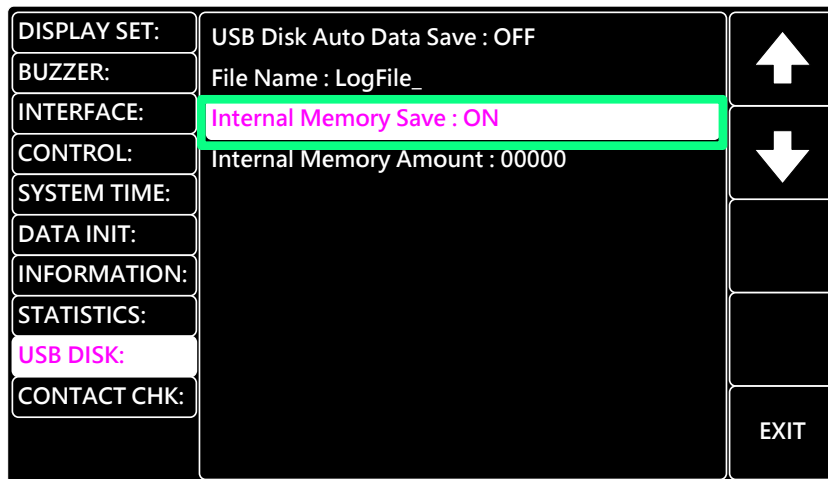

Internal storage function

GPT-15000 provides two ways, internal storage function and USB storage function, to save results during the testing period in addition to its own statistic and analysis functions.

When the internal storage function is activated, each time the test button (START) is pressed, the test results of all tests (every manual or automatic test item) are automatically saved into the internal memory and the maximum saved can **up to 30,000 data**.

After the test processing is complete or the internal memory is full, the data can be transfer to inserted USB flash disk for further analysis.

Internal Memory Save ON/OFF

Transfer saved Data

USB storage function

Another facilitate users to analyze the results of the safety test, GPT-15000 provides the USB storage function. When a USB Flash disk is inserted and the storage function is activated, each time the test button (START) is pressed, the test results of all tests (every manual or automatic test item) are automatically saved to the USB in the form of a text file (txt) for follow-up analysis.

Auto Data Save ON/OFF

Main Feature3 : Sweep Function

The sweep mode function creates a graph of one of the ACW, DCW, IR, GB or CONT tests in either Manual test or the special MANU mode.

TEST	GREEN	BLUE
ACW	Test voltage	Test current
DCW	Test voltage	Test current
IR	Test voltage	Test resistance
GB	Test current	Test resistance
CONT	Test current	Test resistance

DCW Sweep Graph Example

The values of point by cursor

650 max./page

To show the trace graph of test results of the device under test.
Suitable for product characteristic analysis such as break-down voltage/current.

Main Feature4 : Listed AUTO Mode

- Better Observation :
Makes testing condition, result and judgement in same screen

Main Feature4 : Listed AUTO Mode

- Up to 5 groups of AUTO tests can be interconnected.
- Example: AUTO-005 to AUTO-007(5+5+5)=15 Test

Main Features5: User defined SIGNAL IO

- PIN-OUT define : can be set by user
- Output timing : can be edited by user based on production equipment requirement

1 signal for all steps

It means one signal output of TEST PIN will be delivered to all steps all the way till the end of an AUTO test.

1 signal for each step

It means one signal output of TEST PIN will be delivered to each step with continuous counters within each interval between each step, which is particularly practical for certain applications.
